## Advice

Please test the product in an inconspicuous area before use. Instead of LithoPol Wax-Off you may be successful with LithoPol Wexa

" On absorbent surfaces you may apply the chosen impregnator before grouting! This will increase the ease at which excess grouting may be removed

" With the assistance of a white (nylon) pad

" Use only heavily diluted (not for Italian and similar state).

" Alternatively use LithoPol MN-Polish (fluid).

" In order to achieve a shine without intensification of colour use LithoPol MN Care-Seal.

### Please note:

LithoPol Stain-Stop >W< can be used instead of LithoPol MN Stain-Stop for enclosed space environments as it is virtually odourless.

For surfaces that are slightly damp LithoPol Stain-Stop >W< can be used as a pretreatment before applying LithoPol MN Stain-Stop. LithoPol Stain-Stop >W< is also ideal for

impregnating denser stones such as granite and harder marbles and limestone. Please contact our technical helpline for further support.

This advisory information is based on practical experience and is intended as a concise overview. For more detailed information, please see the technical information sheets provided. The products must be used to suit local conditions, and the surface requiring treatment. The manufacturer and distributor accept no responsibility for misuse, or for problems arising during application. In all cases of doubt, test the product first in an inconspicuous area.
